WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

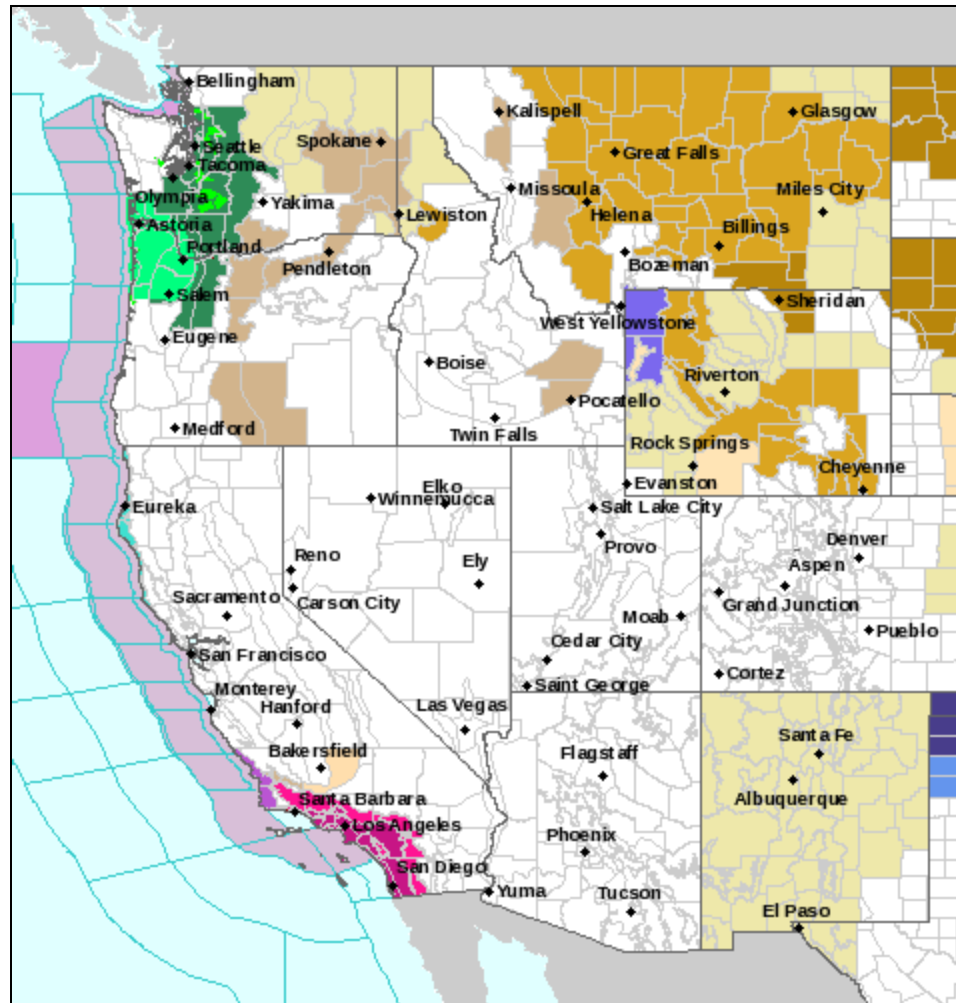

Some light precipitation and cloudiness will linger in the far north through Sunday, otherwise a strong high pressure ridge will begin to take over the weather pattern Sunday night and remain in place through next week. Next week will be substantially warmer and sunny in all areas with the warmest inland areas getting up to around 90 some days. Temperatures will generally be quite a bit above seasonal normals by 10 to 15 degrees. Much lower relative humidity (RH) will return to the region as well.

There will be some light to locally moderate gusty N to NE winds develop later Sunday for areas west of the Cascade/Sierra crest to some coastal locations that will continue through Tuesday morning. Strongest gusts will be around 30-35 mph in the windiest spots at times. This wind will help RH lower quite a bit overall as well. Lighter winds are expected the rest of the week.

SOUTHERN CALIFORNIA

High pressure aloft moving in from the south will bring around 10 degrees of warming each day through Monday. Well above normal temperatures will occur Sunday through Tuesday, with record heat Monday and Tuesday. Minimum humidity will be in the teens Sunday and then in the single digits Monday and Tuesday. Northeast to east winds of 15 to 30 mph with gusts to 50 mph will surface across the mountains and below the canyons and passes of Southern California Monday morning through Tuesday afternoon. The ridge will weaken bringing a cooling trend and a slight increase in humidity Wednesday through the end of next week.
